Delivering the total product

## Delivering a total product, material and logistics package for utilities

Shareholder pressure and increasing regulatory requirements are resulting in growing demand for change in the utility sector. With further emphasis on minimising environmental impact, reining in costs and improving service levels, utility companies are increasingly seeking partners who understand their unique challenges.

nrg2 was created to meet the requirement for fully networked and responsive third party supply chain solutions for utilities. Numerous long-term maintenance and upgrade programmes, coupled with new pipeline infrastructure requirements, means that the demand for fast and effective sourcing and distribution of specialist construction materials has never been greater.

# Delivering innovative supply

Drawing on the knowledge and resources of world-leading gas and water pipeline manufacturer, Radius Systems; along with the national supply and distribution network of W T Burdens: nrg2 is a modern and flexible supply chain approach for today's utility construction challenges.

- **Single source for all utility construction supplies**
- **Comprehensive product and equipment catalogue**
- **National network for speedy delivery or pick-up**
- **Fleet of customised vehicles ensures low risk transportation**
- **Strict handling and unloading protocols maximises site safety**

*"We are committed 100% to improving standards across our industry and to eliminating the risk during the handling and transportation of pipes. We are keen to share our own expertise and also learn from our peers."*

# chain solutions to the utilities

*"nrg2 impressed us from the outset. Their familiarity with our market place was instrumental in our decision to choose them. Because we order such fluctuating quantities of pipes, fittings and materials; flexibility was key for us. nrg2 process our orders and deliver on time; every time. It's a great service."*

**Paul Beeslee**, Senior Procurement Manager, Welsh Water

## Reducing supply chain costs and improving efficiency

nrg2 provides a multi-utility package for contractors and companies looking to outsource the selection, transportation and delivery of a full range of utility pipeline products and supplies. Pipes, fittings, manhole covers, hydrants, kerbs, cement and meters - everything needed to construct or maintain a working utility infrastructure.

nrg2 is recognised by customers for its dedication to stringent supply chain management processes. Through ongoing collaboration with contractors, civil engineers and utility companies; nrg2 delivers maximum efficiency and service flexibility. We listen. We're committed to providing the best resources when and where you need them - our business reputation depends on it after all.

## Convenience

Because we are able to access a comprehensive range of stock quickly, our customers can order based on current needs rather than long term requirements - and avoid expensive stock holding operations of their own. Ordering is easy too and can be completed online or over the phone.

## Flexibility

Whether you have emergency or longer term requirements; single or multiple sites; large, small or fluctuating volumes: nrg2 can flex its stock and delivery network to match. By leveraging our well established network of resources, we are able to respond quickly - and our customers benefit from a professional and timely outsourced service that is cost effective as well as flexible.

## Efficiency

Speed is important for contractors and utility companies operating to tight schedules, or conducting large maintenance operations: delays can result in penalties or complaints from end customers. We are big enough to respond quickly and consistently with 'on time in full' deliveries. Letting our customers down is not an option.

## Managing safety for you

Safety is a huge consideration when transporting large and heavy materials such as utility supplies. Ensuring precautions are taken to protect teams on the ground during loading and off-loading, as well as the public during movement, is part and parcel of our service. Fully accredited to ISO EN 18001 in Safety Management, we take care to deliver end-to-end services safely.

Our industry leading fleet of vehicles incorporates a comprehensive range of safety features, including vehicle stabilisers and reversing cameras. Loading and offloading is high risk and requires safety measures and a professional approach. Our people are fully trained and qualified. We also operate remote control cranes where possible as these enable us to minimise the need for people to be put into high risk scenarios.

## Established services with expert pedigree

Since our inception in 2001, nrg2 has been able to leverage many years of utilities construction expertise, via its highly respected founding partners: W T Burdens and Radius Group.

**W T Burdens** is an independently owned distributor and a leading supplier of civil engineering and building materials to the infrastructure, environmental and industrial markets. The company has a national network of over 50 specialist distribution depots across the UK.

**Radius Systems** is a leading force in the design and manufacture of plastic pipes and fittings for the utility and construction industries worldwide.

The company operates across the pipe lifecycle; from design and manufacture through to installation and repair.

Together, these trusted companies have developed an all encompassing stock management and logistics solution for the utility market: nrg2.

## Why choose nrg2?

We prefer to work collaboratively, we listen and stay in touch with our customers, peers and employees: because operating an open and honest service matters when there are deadlines to meet and people to protect. Our commitment is to not simply meet customer expectations, but to exceed them too.

- With access to many years of **proven industry expertise**, our people are unique in understanding the day-to-day supply challenges of the utilities industry.
- We can source all your materials as well as deliver safely. We have the people and resources in place to provide you with a complete **end-to-end service**.
- We're **environmentally responsible**. With expert planning and efficient use of our depots across the country, we minimise the impact of our operations on the environment.
- Our processes and systems utilise **best practice safety measures** and codes of conduct. Our fleet of vehicles include many innovative safety features and our people are fully trained and compliant with the highest industry standards.

## Put us to the test

We're ready to take on your challenges. If you would like to find out more about our services and discuss your specific requirements, simply call us on +44 (0)1773 582 268.

Let nrg2 resolve your utility supply chain issues.
